

Infrastructure and production technologies

Assembly of Components

Since EC manufactures for many Customers nearly all plastic or composites components, it became obvious to them that EC should be entrusted to care also for the logistics of accessories and the assembly of the complete group of components – ready for the integration into the final product.

By this our customers can concentrate on their core business as they have a reliable and effective system-provider in the EC group.

As EC supplies the complete assembly group, we now can work already in the design stage with the customer to achieve better product properties and lower cost.

Defense technology, mobile container

Train floor completely finished for assembly into the train

Production and assembly of a cabin for a fire engine
