

Honeycomb block with record dimension

With dimensions of 2260 (L) mm by 4480 (W) mm the EC Group has produced their largest honeycomb block so far.

EC does not produce such a mega-block just for size's sake, but to achieve cost reductions for its customers:

Due to this large block dimensions, complex milled honeycomb parts can be nested more efficiently. As a result the production of three smaller blocks with the corresponding cutting-scrap is avoided
