

**EURO-COMPOSITES S.A.
achieves accreditation as
a certified welding
company**

EURO-COMPOSITES S.A. has in April 2008 successfully qualified its welding operation as a „certified welding company“ and it now allowed to use the GSI-seal of approval.

With this qualification the "Proof of aptitude for the welding of railway cars and parts" according to the new DIN EN 15085-2:2008-01 in the highest certification level CL 1 has been reached.

This certification relates to the „MIG 131“ welding process (MIG = Metal-inert gas welding).

EURO-COMPOSITES S.A. uses in its production also the WIG welding process and is worldwide one of the first companies that runs a double-head Friction Stir Welding (FSW) unit on an industrial base.

If necessary a certification of the WIG and FSW processes can be done on short notice too.
